Post Mix Dispense

TRUPour Post Mix Craft Soda Tap

Post Mix Craft Soda Tap

TRUPour Post Mix Tap allows beverage operators to showcase their premium drink offerings and provide unique user experience. The TRUPour post mix tap offers a stylish alternative to traditional beverage dispensing valves without sacrificing the beverage performance.

In the heart of the Post Mix tap is linear piston integrated with soft pour diffusion system to reduce foaming and superior carbonation. The modular design allows the tap to be mounted on a tower, beverage dispensing unit or as standalone series of tap mounted on a wall. Integrated push to connect fitting allows fast and easy installation, and reduces the foot print of the tap. The design allows the taps to be used with traditional ceramic flow controls or volumetric pump system to maintain consistent ratio control, eliminating frequent adjustments.

Features

- Highlights and showcases the premium products and differentiates from the standard products and equipment
- 100% Stainless Steel Construction
- Seamless stylish design
- Flow rates range from 1.5 to 4.5 oz./sec.
- Smooth handle efficacy
- Reduced foaming
